Subject: MRI volume visulization
Posted by partovi on Wed, 23 Apr 1997 07:00:00 GMT

i admit to being a novice.

i am trying to visualize 92 MR brain slices as a volume (eg. surface map) on a pentium pro, running NT 4.0, and IDL 4.x

the catch is, i am hoping (dreaming?) that i can rotate the volume interactively, or near-interactively. any ideas if this is possible? even just a yes / no would be appreciated so i don't waste time (or waste newgroup space).

thank you kindly.
