Subject: Initialize new variable array with nan or -9999 values

Hello,

This seems like it should be so simple but I can't figure out how to do it. I am creating a new array, distance=fltarr(304,336,500) and I want it to be initially filled with either nan or -9999. My results could possibly be 0.0 so I need to know where those are calculated values and not just part of the original array. Thank you.

Sincerely,
Morgan
