
Subject: Bar coordinate shift with cgBarPlot

Hi all,

I am using Coyote's cgBarPlot to plot some vertical bars, but I'm having hard times to shift the bars of a given quantity in the horizontal direction. The BAROFFSET parameter does not do the job, because I need the bars not to be centered on a thick (i.e., I need to change their X coordinate), while BARCOORDS is an output parameter.

Is there any easy way to do that?

Thanks,
Federico
