Just to update on my original post. I was noticing a delay between typing "plot, indgen(9)" and the plot showing up in X11. Not always, not when the machine is under load, just randomly.... This was with Mavericks, and with the latest XQuartz, and with gl_driver.so renamed to gl_driver.so.backup.

That still happens, but there's an easy fix: just arrow up in Terminal, and the plot updates. Weird. Mysterious. Mystical. But not a big deal.

Otherwise 7.1.1 on Mavericks seems dandy.
