Hi All,

This may be of interest if you're developing with IDL on Mac OS X.

A while back I made up a codeless language for the IDL language for BBEdit and TextWrangler. It provides syntax highlighting, autocompletion of keywords, function lookups, code folding, and other cool stuff. I've updated it for IDL 8.3, and made it available with a bit of a write up at http://hintspace.blogspot.com.au/2014/02/bbedittextwrangler- codeless-language.html

There's also some info about using Exuberant Ctags to scan your source tree, allowing BBEdit or TextWrangler to provide lookup for procedure definitions in your code.

Hopefully some of you will find these useful - please let me know if you can suggest any improvements or find some mistakes!

cheers,

Will.
