> Recently, I felt the necessity (in IDL) of a subroutine that was coded extremely well in Fortran, with a skilled use of nested do loops over some matrices. I thought that the time had come to interface IDL and Fortran.

Nowadays I use /AUTO\_GLUE in CALL\_EXTERNAL. Here is a Fortran 77 example (I used Fortran 30 years ago :-):

test.f:

```
subroutine test(array, n,m)
integer*4 n, m
real*8 array(n,m)
write(*,*) array
end
```

gfortran -c -fPIC test.f

gfortran -shared -o test.so test.o

test.pro:

```
pro test
n=3l
m=4l
array=dindgen(m,n)
trash=call_external('test.so', 'test_', array, n, m, /auto_glue)
end
```

IDL> test

% Compiled module: TEST.

0.000000000000000	1.000000000000000	2.000000000000000
3.000000000000000	4.000000000000000	
0	5.000000000000000	6.000000000000000
8.000000000000000	9.000000000	7.000000000000000
0000000	10.000000000000000	11.000000000000000

regards,  
Lajos
