I don't feel confident about playing with this without expert guidance, but this may be the solution.

In directory /Applications/exelis/idl/bin/bin.darwin.x86_64 we find:

```
-rwxrwxr-x 1 682 _lpoperator 88096 May 8 2013 libz.1.2.3.dylib
lrwxr-xr-x 1 682 _lpoperator 16 Jul 8 2013 libz.1.dylib -> libz.1.2.3.dylib
```

In directory /opt/local/lib we have:

```
-rwxr-xr-x 1 root admin 84532 May 3 2013 libz.1.2.8.dylib
lrwxr-xr-x 1 root admin 16 May 3 2013 libz.1.dylib -> libz.1.2.8.dylib
-rw-r--r-- 1 root admin 100976 May 3 2013 libz.a
lrwxr-xr-x 1 root admin 16 May 3 2013 libz.dylib -> libz.1.2.8.dylib
```

The current version of zlib is 1.2.8. I suppose one test would be to change the link in the IDL directory to point to the library in /opt/local/lib. I'm afraid that is beyond my skill level.
