Well, yes, that's what I would recommend. Your code reminds me fondly of the 1970s. :-)

To take a snapshot of a window and save it as a PNG file these days, for example, you need only do this:

```
void = cgSnapshot(Filename='mywindow.png')
```

And, I'm almost certain you don't have to do *\*anything\** in the Z-graphics buffer anymore. :-)

Cheers,

David
