Well, I was wrong. You *can* make a 40000x20000 window in the Z-buffer.
I can't tell what is *in* the file because I don't have software,
apparently, that can open a file that big. But, it certainly appears to
have been created. :-)

I presume you can do the same thing in PostScript if you have a hard
drive big enough to hold the file.

Cheers,

David
