Hi,

I'm using cgplot in a cgwindow, specifying the color with a long integer. This works fine. But when I try to save it as a graphics file, I get an error of this type:

Traceback Report from CGPLOT:

```
% CGDEFAULTCOLOR: Improper input color. It is possible 24-bit colors (LONGs)
    are being used in indexed color mode to specify colors.
```

Here is a minimal example:

```
cgwindow
cgplot, /add, [1, 2, 3], color = 9243623L
; Fine so far
cgcontrol, output = 'test.jpg'
```
