I would bet that they forgot to register a DLM "unload" routine for .full reset. So the DLM is probably being unloaded, but it isn't being given the chance to unload any of it's data structures. But it's free!

There is an exit handler registered and it attempts to do the right things.

I think this may be a numpy bug. See
http://mail.scipy.org/pipermail/numpy-discussion/2009-March/ 040849.html
