Hi Jason,  
thanks for chiming in. I do not think that this is a bug in numpy as the same problem occurs with scipy:

```
sp=pyimport('scipy')  
.f
```

also crashes IDL.

Cheers,  
Haje

I would bet that they forgot to register a DLM "unload" routine for .full reset. So the DLM is probably being unloaded, but it isn't being given the chance to unload any of it's data structures. But it's free!
