Hi,

I'm running code that used to properly deal with this issue but "all of a sudden", all of my plots are red again...for the first time in *years*.

I'm running IDL 7.0.6 (and not interested in upgrading) on Mac OS 10.8.5 and XQuartz 2.7.5.

Unfortunately, I haven't been using IDL regularly and lots of changes have probably been applied to my system since I last had regular display functionality. I suspect it's the new XQuartz?

thanks for any thoughts.

kelle
