---

hi all,

I'm wondering if anyone has a recommendation of how to organize the file structure of an IDL project when using Git, Github, and IDL.

I could imagine simply creating the Git repository inside a project directory of the IDL workspace. Is this the right way to do it? I have read something on stackoverflow saying that this is not the recommended way to do it. I tried reading the documentation of EGit, the Eclipse Git plugin, but I couldn't quite figure it out.

thanks

Mark
