Subject: IDLnetURL to test for files

Posted by Matthew Argall on Thu, 20 Mar 2014 17:27:33 GMT

I am trying to create a GetHttpDirList method for the IDLnetURL object (there exists a GetFtpDirList method already) by searching a webpage's content for tags and extracting the links. I treat the links as directories. Is there a way I can determine if a specific link is a file that can be downloaded? Perhaps with the response header or the response code when I set the URL_PATH to the file?

Thanks
