
Subject: cgwindow unable to create PDF file in IDL 8.3

Hi,

We recently upgraded to IDL version 8.3 (from version 7.1) and now my cgwindows do not seem to be able to create PDF files. When I try a window pops up with an error message:
"CGCMDWINDOW::AUTORASTERFILE: Unable to create PDF file. See cgPS2PDF documentation."

A test session:

```
IDL> cgwindow  
IDL> cgplot,[1,2],/add  
IDL> cgcontrol,output='test.pdf'
```

I looked at <https://www.idlcoyote.com/idldoc/cg/cgps2pdf.html> without finding anything obvious.

I have updated the Coyote library today. PDF file creation still works in idl version 7.1.

My environment is Debian 3.12 x86_64 GNU/Linux.
