---

I got a question when I was trying to save the interested data from array A to a NEW array B.

```
j=0
FOR i=0,n-2 do begin

  IF A[i+1]-A[i] gt 80 THEN BEGIN
    B[j]=A[i]
    j=j+1

  ENDIF

ENDFOR
```

it seems theres something wrong with B[j]=A[i] should I define B as an array first? Or anyone has a better idea? I know it is a stupid question....sorry about that
