Subject: MATLAB to IDL Conversion
Posted by mikejohnryan08 on Tue, 08 Apr 2014 20:13:37 GMT

I was wondering, is there a simple way to convert a code from MATLAB to IDL? I am trying to run a previously written MATLAB script to create a 3d anaglyph from two images in FreeMat, but it is very slow. I've recently received a temporary license for IDL 8.3, which I would love to replicate this code in, as I believe both languages are capable of doing this.

But since I am still very unfamiliar with IDL I am having difficulty doing so. Any advice/help for converting this would be fantastic!
