Subject: Upload a file on a website

Posted by   on Tue, 22 Apr 2014 23:07:15 GMT

Hi all,

First, thanks a lot for the priceless help you provide with this group! It helped me many times.

Second - of course - I have a question about IDL:
Is it possible to upload a file on a website with IDL ?

Specifically, I work on asteroids, and I usually have to classify them using this website:
http://smass.mit.edu/cgi-bin/busdemeoclass-cgi

It's very simple: you upload a spectra, and the website returns the spectral types that better fit your data, and it can send you the results by mail.

Unfortunately it's pretty long to do it manually, especially when you have ~200 spectra to classify! Is there a way to make it quicker with IDL ? One problem is that the website does not changes its URL with keywords unlike, for example SIMBAD or VIZIER for those who know these tools...

Thanks a lot for your help!
