Hello,

What would be the best way to run this MATLAB code in IDL  
([http://www.ee.cuhk.edu.hk/~snli/MATLAB\\_code.zip](http://www.ee.cuhk.edu.hk/~snli/MATLAB_code.zip)) which creates a 3d red/blue anaglyph from two images?

Also, since this is a code from an academic source, would I be able to use this to build onto for a more involved program for a masters thesis as long as I source the code's author in my report?

Thanks!
