I find that when I rerun a script that creates a (function graphics) plot it always creates a new window, which steals the focus (and pops up the new window in the wrong place). This drives me crazy. It would be much better if I could erase the old one and reuse the same window. Then my window layout would stay put and focus would stay in the editing window.

Yep...

http://www.exelisvis.com/docs/Erase_Method.html

Looks like it got missed in the docs for each graphics function, but it's there!
