Hi:

My problem is with PV-Wave on the VAX (although I hope that's not the reason for the problem).

I'm trying to use the widget function

```
status = WwSetValue( idTextBox, Scroll=XX)
```

The problem is that the documentation (both printed and online) have very little info on the scroll keyword, just that it works with WwTextBox and (other escapes me).

I've tried using values that represent a line number, and even character number of the string displayed in the box.

I'm trying to get the box to programmatically scroll down to the last line of text in the box.

Thanks,

Jack Daniel
