The number x is just fine, the way you print it is not:

```
IDL> x = '133.359996'
```

```
IDL> print, double(x)
```

```
      133.36000
```

```
IDL> print, STRING(double(x), FORMAT='(F10.6)')
```

```
133.359996
```

Cheers
