
Subject: print .txt files with all my data in columns

Hi all,

I am quite new using IDL and I would like to merge different arrays just in one .txt file.

I wrote at the begging of my code:

```
CLC_CAPRIfile1990 = odir + country + '_1990_CLC_CAPRI.txt'  
openw, 4, CLC_CAPRIfile1990
```

```
**first array [21,3]  
capri_clc1990 = [[long(arableCLC90s)], [long(arableCAPRI1990s)], [long(PC_CLC90s)]]
```

```
***second array [21,3]  
capri_clc2000 = [[long(arableCLC00s)], [long(arableCAPRI2000s)], [long(PC_CLC00s)]]
```

I would like to print an array of [42,3], that's mean that the merging should be in columns (I can accepted also in rows).

```
printf, 4, *****I don not how to do this print.
```

Thank you very much in advance.
Regards,
Carolina
