Hi all,

Any clue what's going on here ?

```
a = randomn(seed, 248, 256, 9972) * 100. + 4.e3
```

```
print, total(a) ; gives 1.42030e+12
```

```
print, total(a, /double) ;gives 2.5324144e+12
```

```
print, total(total(total(a, 1),1));gives 2.53250e+12
```

Thanks !
