I cleaned up a few visual bugs in the beta and IDLdoc 3.6 is ready for release. Get the new version at the ([releases])[^1] page of the GitHub IDLdoc wiki. Features are the same as listed for the beta:

* Checks for updates when using the VERSION keyword.

* Added Exelis VIS Doc Center output.

* Provides links to IDL library routines referenced in rst markup code
  syntax.

* HTML rst markup directive to include HTML directly into output
  (contributed by Phillip Bitzer).

* Reporting only non-empty, non-comment lines in routines/files now.

* Improved algorithm for computing cyclomatic complexity and also
  reporting modified cyclomatic complexity.

* Updated to MathJax 2.0 and using the complete MathJax distribution
  for better LaTeX rendering.

* Listing methods inherited from parent classes.

* Miscellaneous bug fixes.
