Subject: Udpate plot() range when drawing a polygon()

Hi all,

when I do an overplot the plot range is changed automatically, which is great, but this doesn't work with polygon().

Would it be possible to force plot to change its range according to the polygons which are drawn in the /DATA space? I know I can keep track of my range by myself but this is a pain if I draw on the fly a lot of polygons representing my error bars...

Thanks!

Fabien
