you for that!
```

Well, then, don't set the GLINETHICK keyword!

This code doesn't draw a grid on the second plot:

```
window, xs=800, ys=400
!p.Multi=[0,2,1]
map_set, /orthographic, -53, 191, 0, $
      /grid, latdel=30, londel=30, /isotropic

map_grid, latdel=10, londel=10, glinethick=1, glinestyle=2
map_grid, latdel=30, londel=30, glinethick=4, glinestyle=0
```

```
map_set, /orthographic, 0, 0, 0, /isotropic, /advance  
map_continents  
!P.Multi=0  
END
```
