I used the VECCOLORS keyword to make the vectors but it always be black or white. I used information from here to create the color: http://www.idlcoyote.com/color_tips/getcolor.php

My code is like this:

```
Yellow = [255,255,0]  
cgDrawVectors, x, y, pos_x, pos_y, fraction=0.001, VECCOLORS= yellow, /ORDERED,  
/OVERPLOT
```

The vectors are still white.
