Hello Matthew,

Thanks for the examples. I wanted to make a plot similar to
http://www.idlcoyote.com/gallery/multiple_image_plot.pro but without images and colorbar. I will
use cgPlot for my line plots. I still don't understand if there is a way we can manage margin and
gap sizes. For my purpose, I don't need to create so huge plots. Very minimal or no gap between
plots is fine. Can I change the plotting window size to fit these all 10 x 10 plots in one page?

Thanks in advance.
Madhavan
