> Is there a way to limit the number of CPU cores used by IDL? I'm on a windows machine with 6 cores. When they're all occupied at 100%, it's pretty much impossible to switch to a browser, for example. I'm thinking that if I could reserve one CPU for other tasks, I could read the news while I wait... (or sometimes even be able to call up the task manager to kill the job!)

IDL> cpu, tpool\_nthreads=5
