I tried doing something like the following but run into trouble creating the temp variable name to use for each new structure and then using it. How do I create a new named structure or array each loop?
>

Off the top of my head, I can't think of any reason why you would NEED a structure if you are doing this in a loop.

If you need the variables for later, just make an array of structures:

```
struct = {...}
varStructs = Replicate(struct, n)
```

Cheers,

David
