This part of the code it doesn't make sense to me.

```
i_sim = where( (x lt 301) and (y lt 301) and (x ge 0) and (y ge 0), n_sim )  
if n_sim gt 0 then DIM[i_sim] = SIM[i_sim]
```

Does the i_sim corresponds to SIM that I wrote or it's something different?
