Since my last message I have changed PV-Wave's "wavestartup" script so that it automatically starts the HDF module. If anyone want to see this, send me an e-mail...

Now I have a new problem: netCDF files created by PV-Wave do not appear to be readable by anything other than PV-Wave. Trying to use the 'ncdump' program only gives me the following

ncopen: Not a netcdf file

Anyone have any ideas ? My netCDF installation is v2.4.3, and PV-Wave's HDF/netCDF module is v3.3...
