Hi guys,

Paulo Panteado updated his uber-installation package for IDL 8.0 some time ago
http://www.ppenteado.net/idl/idl71_rt.html

I was wondering if anybody has the ui package for IDL 8.3.

If not, do you know what is the best way to create it? I guess that I would have to download the VM for every platform and put all files in the same place (including the manifest file).
Paulo was also pointing out that the startup script made in Windows for Linux has CR+LF ending the lines, which does not seem to work in a Linux shell.

Apart from this, am I missing anything else ?

Thank you for your help,
nata
