Subject: How to make Box-Whisker plot with log-log scale?
Posted by atmospheric physics on Fri, 01 Aug 2014 10:42:54 GMT

Hello,

I have the statistical data - [minimum, lower_quartile, median, upper_quartile, maximum] for 12 data arrays. I wanted to use cgBoxPlot or BOXPLOT in IDL but with log-log scale. Can anyone tell me what shall be the data format for using cgBoxPlot? I tried to get the example 'mm_data.dat' file for understanding the data structure (http://www.idlcoyote.com/gallery/box_whisker_plot), but it seems the webpage does not direct to the correct location.

Look forward to your suggestions,
Thanks in advance.
