Hi,

I am not sure to understand well what you try to do but what is sure is
that you are overwriting many times a new median value to the same place
in clean[k,l] while you are still in the i, j loop, thus making many
useless operations without writing their results.

I *think* you might want to move the block:

    med = MEDIAN(holder)
    clean[k,l] = med

out of the two inner loops and also replace it by:

    clean[k,l] = MEDIAN(holder)

But this you should check by yourself

Fabien
