You can use the MESSAGE procedure, e.g.

```
pro testpro
  message, 'Entered...', /informational
  ; do stuff
end
```

```
IDL> testpro
% TESTPRO: Entered...
IDL>
```

I use this in concert with a debug keyword, e.g.

```
pro testpro, debug=debug
  if ( keyword_set(debug) ) then $
    message, 'Entered...', /informational
    ; Do stuff
end
```

You can also pass an empty string.

cheers,

paulv
