Hi All,

How can I color the specific region of my contour with different color clipping?
for example in following data, the values are in [0,1550] range and I want to color [0,450] range
with clip=[1,80] and color the [1000,1500] with clip=[160,240]

```
IDL> data = cgDemoData(2)
IDL> cgLoadCT, 33, NColorS=42, Bottom=1,CLIP=[20,100]
IDL> cgContour, data, /Fill, NLevels=12,C_Colors=Indgen(42)+1
```

Thanks,
