Hi all

So far I was working with 1 pair of stings (total=2 strings) but now I need to work with 180 pairs (total=360 strings). I define my two strings as shown below:

1 = 'C:\Users\string1'
2 = 'C:\Users\string2'

procedure....

Because now I need to define 360 strings I was wondering if I can write a loop instead of defined this like this.

With thanks
Gina
