No loops necessary! Two ideas:

```
myStrArr = 'C:\Users\string' + strtrim(indgen(360), 2)
```

```
myStrArr = 'C:\Users\string' + string(indgen(360), FORMAT='(i03)')
```

The format keyword is used to ensure all numbers have 3 digits (i.e. 001), so that sorting them is easier.
