Hi all

I have data named like this:

dat(001,001)

dat(001,002)

dat(001,003)

dat(001,004) and so on till a(001,200).

I had import my data like this:

Data = 'c:\path\dat(001,'+strcompress(i)+'').csv'

The first part of dat(001,001)is fixed is always 001 but the second part is a string of 3 numbers which have to be created. I want to convert these numbers from 0-200 into a string of 3 numbers. Can anyone knows how to do it?

Many Thanks

---
