Subject: CONTOUR keywords PATH_INFO and PATH_XY

I have a binary mask (just 1s and 0s) and I need to extract the boundery polygons of 1s and
convert them to a KML or shapefile. All the documentation I've found seems to suggest that
'Find_Boundary' routine written by idlcoyote will work. I tried quite a few times but did not get any
satisfactory results. Does anyone know how to create Shapefile/KML files from outputs of
CONTOUR keywords PATH_INFO and PATH_XY
Thanks,
Suman
