Hi there,

Has anyone worked with the fitting procedure mpfit.pro in IDL? When my fitting function exceeds around 3600 characters (I have to use really large fitting functions) the code gives me this error:

```
% MPFITEXPR: ERROR: execution of "The FUNCTION" failed
```

```
% MPFITEXPR:      check syntax and parameter usage
```

Has any seen this and knows a work-around?

Thanks,
Payam
