Hello,

I would like to know the size of a text-annotation in a plot:

eg.

```
w = window(dimensions=[200,200])  
t = text(0,0,myannotation,font_name=myfont,font_size=15,/device)
```

How can I find out the pixel size of myannotation?

I need to know this for the scaling of another new window.

Thanks and best regards,
Corinne
