Dear all,

I got a 3D data. I applied a SMOOTH function like `smooth(a,3)`, the plots look fine and when I print the number of elements on the screen are equal as the original data. But when wrote to a file

I found that there is a missing element or number is not corresponding with original data. I

checked using excel. I am a bit confused, I need some help. Any suggestion is very welcome,

Thanks

Zolile
