Subject: Re: cgimage - two images on the same window ?
Posted by g.nacarts on Wed, 15 Oct 2014 14:47:49 GMT

Hi

I have six images and I want to plot all of them on the same window. I use the tvscl command but I want to replace it by !P.Multi. I tried the following

!P.Multi=[0,3,2]
cgImage, 1
cgImage, 2
cgImage, 3
cgImage, 4
cgImage, 5
cgImage, 6
!P.Multi=0

I notices that the images shrinking and look "fat". Can anyone help with this?

Regards,
G
