Subject: Re: IDL on Mac Funning Yosemite?
Posted by Saurav on Sat, 18 Oct 2014 23:51:22 GMT

Hi Ivan and Lajos,

I got the same problem in IDL 7.1 and moved IDL's libz.1.dylib as you suggested. Now IDL gets started up, reads the startup file, but then crashes:

saurav: ~ > idl
IDL Version 7.1, Mac OS X (darwin x86_64 m64). (c) 2009, ITT Visual Information Solutions

% Compiled module: ASTROLIB.
% Compiled module: LOADCT.
No matching pixelformats found, perhaps try using LIBGL_ALLOW_SOFTWARE
Abort trap: 6
saurav: ~ >

Any ideas what is happening and how to fix it?

Thanks, in advance, for your help,
~Saurav
