Hi,

just sharing some frustration.

Worked all day on some coding, most of it in one file. I save every few minutes to the HD and at the end of the day to a second location.

When I saved (ctrl-s) towards the end of the day windows went "blue-screen". Reboot. Empty file.

Empty like a lot of empty lines, no text. All gone.

I would be happy to hear if the file can found in some hidden directory.

Guess not. That calls for some beer.

Cheers,

h

Win 7 64-bit

IDL 8.4
