Hi Helder,

```
IDL> !VERSION
{
    ARCH: "x86_64",
    OS: "linux",
    OS_FAMILY: "unix",
    OS_NAME: "linux",
    RELEASE: "8.3",
    BUILD_DATE: "Nov 15 2013",
    MEMORY_BITS: 64,
    FILE_OFFSET_BITS: 64
}
```

```
IDL> a = dictionary()
IDL> a['item'] = 0l
IDL> a.item++
IDL> a
{
    "item": 0
}
IDL> a['item']++
% Type conversion error: Unable to convert given STRING to Long64.
% Detected at: $MAIN$
% Object reference expression not allowed in this context: A.
% Execution halted at: $MAIN$
```

Is this supposed to work in IDL 8.4 or in Windows?

Fabien
